European heart journal case report consent

Working off-campus? Learn about our remote access options [Author Guidelines](#) [Essential Forms](#) The European Journal of Heart Failure requests which all authors meet: an ICMJE conflict interest disclosure form [An author contribution form](#) please note that references to these forms are here, and authors will have the opportunity to complete versions of these forms in the online submissions system. Introduction Thank you for your interest in the European Journal of Heart Failure. Please consult the following instructions for help preparing your manuscript, and feel free to contact us with any questions. To ensure rapid peer review and publication, manuscripts that do not follow the following instructions will be returned to the author corresponding to the technical revision before undergoing peer review. We look forward to your submission. Papers on behalf of ESC-affiliated institutions, such as ESC associations, working groups and councils, will be reviewed and approved by the ESC before submission to the journal. During the submission process for your article, you will need to confirm that this process has been followed. The Goal and Scope is the International Journal of the Heart Failure Association of Cardiology dedicated to the advancement of knowledge in the field of heart failure, the European Journal of Heart Failure. The magazine publishes reviews and editorials to improve understanding, prevention, investigation and treatment of heart failure. Molecular and cellular biology, pathology, physiology, electrophysiology, pharmacology, as well as clinical, social and population sciences are all part of discipline that is heart failure. Accordingly, manuscripts on basic, clinical and population sciences are invited to be presented. Basic contributions on nursing, elderly care, primary care,

health economics and other specialist areas related to heart failure are also welcome. Heart Network participates in heart failure's European journal Heart Network which is a network of editors from most heart magazines. Information is exchanged between editors on a regular basis. The network has recently approved a common ethics standard. The aim is to ensure transparency and honesty in the scientific process that promotes ethical conduct in the performance and publication of research. The following will be treated as parts of the process: A. Disclosure of potential conflicts of interest for everyone involved in the demonstration of research and in the evaluation and publishing process of a manuscript. Relevant relationships with commercial interests must be disclosed in accordance with the journal's sponsorship society guidelines, or, when no such guideline exists, according to those of the AHA, ACC, or ESC. Birth. Scientific fraud and data falsification, unnecessary or duplicate publishing, and the discovery of plagiarism and the establishment of particularly cautious intensive review procedures for adopting one. The standard of dealing with authors convicted of fraudulent practices. c. Maintaining confidentiality and restrictions where appropriate. d. Creating uniform criteria for establishing authorship. To qualify for authorship, individuals would have contributed substantially to the intellectual content of the paper in at least one of the following areas: imagination and design research, acquired data, analyzed and interpreted data, statistical analysis, handled funds and supervision, drafted the manuscript, or made significant modifications of the manuscript to important intellectual material. The authors must give final approval to the version to be submitted and any revised version must be published. For multi-centre tests, individuals who accept direct responsibility for the manuscript must fully meet the criteria of authorship defined above and the contributors who do not meet these criteria must be accepted. E. Avoiding false claims of ownership, priority by focusing on previous publications. Female- Avoid excessive claims of the benefits of a product/technology, along with publication as well as news media. Village. Note compliance with institutional review board requirements and, when appropriate, laboratory procedures for animal research are approved, and that research conforms to the ethical standards of the Helsinki Declaration, the Geneva Declaration, the Belmont Report, and good clinical practices from the FDA, and the International Committee of The Institutes' Medical Journal Editors (ICMJE): uniform requirements for manuscripts submitted to biomedical journals: writing and editing for biomedical publications (Haatologica 2005; 89:264). Pre-submission 1. Editorial review and acceptance acceptance criteria for all papers are the quality and originality of research and its importance to our readers. Except where otherwise stated, the manuscripts are double blind colleagues reviewed by two anonymous reviewers and editors. Final acceptance or rejection rests with the editorial board, which holds the right to refuse any content to the publication. Manuscripts should be in clear, concise and direct style. Where contributions are judged as acceptable for publication based on content, the editor and publisher have reserved the right to modify TypeScript to eliminate ambiguity and repetition and improve communication between author and reader. If sweeping changes are required, the manuscript will be returned to the author for modification. 2. Pre-Submission Resources 2.1. Before presenting author services, we encourage you to browse Wiley's author resource site, which provides useful information on topics such as creating your articles and digital artwork; Ethics Published; copyright and open access; And how to promote your published work. Article Preparation Support Ville Editing Services provide expert help with English language editing as well as translation, manuscript formatting, picture illustration, Formatting, and graphical abstract design - so you can present your manuscript with confidence. Also, check our resources to prepare your articles for general guidance on writing and preparing your manuscript. 2.2.Pre-submitted English language editing writers for whom English is a second language are advised to consider editing their manuscript before submission to improve professional English, and to ensure the paper is clearly written in standard, is suitable for scientific English language discipline. It can be started by a service like the Wiley English language editing service in . Please note that using the Vile English Language Editing Service does not guarantee that your paper will be accepted by this journal, and all services are paid and arranged by the author. 3. Manuscript Preparation 3.1. The European Journal of Manuscript Categories and Criteria Heart Failure accepts the following categories of articles: Research articles These should not exceed 3500 words (excluding references, tables and figures) and can contain up to a maximum of 6 figures and/or tables and 30 references. Research articles should be divided into the following sections: (1) title page, (2) Abstract and six keywords, (3) introduction, (4) methods, (5) results, (6) discussion, (7) acknowledgement, (8) financing, (9) conflict of interest, (10) reference, (11) figure legends, (12) appendices, (13) tables, (14) figures. The essence should be divided into the following sections 'Objective', 'Methods and Results' and 'Conclusions'; It should not exceed 250 words. The european journal of the review heart failure published a limited number of scholars, comprehensive review letters. The review should not exceed 3500 words. They must briefly and evaluate research in the serious subject area, and should discuss the implications for the future. Reviews contain unstructured abstracts with no title, which should not exceed 250 words and can include up to 45-50 references. Please see below for systematic review. Systematic reviews These reviews should follow the format of research articles (see section, 'Research Articles'). These should be presented as a research article during the submission process. The short abstract it will be used for eTOC and should no longer exceed 75 words. Excluding editorial references must be limited to 1500 words, with a maximum of 15 references. They do not require an abstract and may include a table and/or a figure. In particular, the addition of a figure would be welcome and could add to the understanding and attractiveness of the article. The following different categories of editorials can be considered: editorial note. Written at the invitation by the editor, this is a comment for a research article and should discuss its results, compare them with current literature and give a personal interpretation of the study. Opinion. It's a On an occasional item. Whether it should be invited or not. When we get more perspectives about a similar topic they can be assembled in a range of different perspectives in the index page. However, his labelling will continue to be a 'viewpoint' in the title page so that he can be treated alone. Short Report These reports should not exceed 1500 words and should include a background section (≈100 words), goals (≈50 words), methods (≈300 words), results (300 words) and conclusions (250 words). The editorial team has the right to decide which of the tables/figures presented is necessary. A structured abstract not exceeding 250 words is also necessary for internet purposes. Letters to the editor's letter to the editor may have commented relationships to an article published in our journal over the past months. These letters should have a maximum of 3 authors, not exceeding 500 words and a maximum of 5 references, including a reference to the article they are commenting on. We can ask for answers from the authors of the original article. Letters and replies should be published simultaneously. Sentences' letter about the article... ' Research will be added to the title to avoid confusion with articles. Research papers based on original research findings are also allowed. The letter can include a maximum of 8 references, and 1000 words including a figure and/or table. The research paper must have no abstract and no sub-heading. However, a brief description of the methods, results and findings is required. Case report These reports should not exceed 1200 words. The case report should include an unstructured abstract with no sub-head (no more than 100 words), an introduction, case details under the heading(s), 'case reports' and discussion of findings in the context of current practice. Study Design These should not exceed 3500 words (excluding references, tables and figures) and can contain up to a maximum of 6 figures and/or tables and up to 30 references. Study design papers should be divided into the following sections: (1) Title page, (2) Up to abstract and six keywords, (3) introduction, (4) study design, (5) discussion, (6) acknowledgement, (7) financing, (8) conflict of interest, (9) references, (10) figures, (11) appendices, (12) tables, (13) figures. The essence should be divided into the following sections 'Objective', 'Methods' and 'Conclusions'; It should not exceed 250 words. Book review book reviews can include 800 words, including a maximum of 3 references. They should have no abstract and no sub-title. Graphical abstract files Authors are encouraged to submit a graphical abstract for research papers and reviews, which will be presented near the written abstract and in the table of contents of the issue in which your article appears. This is an opportunity to create a clear visual representation of the main message of your article to attract potential readers. To supply you Follow the instructions provided and use the templates supplied during submission. The graphical abstract should be presented to the scholars by the name 'graphical abstract image'. 3.2. Prepare your manuscript text using manuscript format and structure general format word processing package (save in .doc or .rtf format). Submission of text in the form of PDF files is not allowed. Manuscripts must be double-spaced, including text, tables, legends and references. Number on each page. Please avoid footnotes; Use instead, and notes within brackets, as sparingly as possible. Enter text in the style and order of the magazine. Type references in the correct order and style of the magazine. Type inappropriately without hyphenation, except compound words (where two words are joined to form a new word such as end-styolic, non-infarcted). Type the title in the style of the magazine. Use a one-time tab key for paragraph indents. Where possible use times new Roman text font and for symbols for Greek and special characters. Use the term processing formatting features to indicate bold, italic, Greek, maths, superscript and subscript characters. Clearly identify unusual symbols and Greek letters. The difference between letters O and Zero; Letters I and L; and number 1. Look carefully at the final copy of your paper, as any spelling mistakes and errors can be translated into a typeset version. Style and spelling Oxford English spelling should be used. Writers whose first language is not English are requested to carefully check their manuscripts before submission. This will help speed up the review process and avoid confusion. Abbreviations of standard SI units of measurement should only be used. Helsinki's Ethics Declaration: The authors must comply with their study Helsinki's declaration, that the locally appointed ethics committee has approved the research protocol and that informed consent has been obtained from subjects (or their guardians). Coming guidelines: The contribution of animal research in enabling better health for humans and animals is smashing and the EJHF is committed to the publication of research studies which use animal models, but seek the same rigorous attention to detail as in clinical trials. Failure to describe research methods and report results has scientific and ethical implications for the whole research process and the reputation of those involved. Experiments involving animals must be properly designed, analysed correctly and then reported transparently, both to increase the validity of the results, and to maximise scientific benefits. The manuscripts published in this journal should include a minimum amount of relevant information to ensure that study methods and results are reviewed, analysed and repeated. EJHF will therefore refer to coming (Animals in Research: Vivo experiments As the basis for the process of guidelines Manuscripts of research related to animals. These guidelines were generated by the National Centre for the Replacement, The Reduction of Animals in Finishing and Research, an independent scientific organisation set up by the UK government, in consultation with scientists, statisticians, journal editors and research funders. Quoting DNA sequences and Genbank accession numbers in an article for each and every gene accession number, the authors must type the accession numbers into the bold, underlined text. Letters in accession numbers must always be capitalised. Example: (Genbank Accession Nos. AI631510, AI631511, AI632198 and BF2232228), a B cell tumor from a chronic lymphatic leukemia (GenBank not accession. BE675048), and a T-cell lymphoma (Jenbank accession No. AA361117). 3.3. Parts of the manuscript title page should include the following in the title page: (1) Title, (2) The name of the author(s) where the work was done, (4) the status of all authors, institution and location, (5) telephone number, fax number and e-mail address of the corresponding author, (6) institutional affiliations of authors (including corporate appointments) must be accepted at one foot, (7) total words count. Abstracts and keywords can't contain more than 250 words in all abstracts and should be presented as a separate file. The essence should be formatted with the following title: (1) Target, (2) Methods and Results, (3) Conclusions. A maximum of six keywords can be submitted. Introduction This section should provide justification for studying in the context of previous work by other authors. Methods This section should be adequately detailed to enable the recurrence of the study by other investigators. If relevant, the section can be divided into major subsections. For animal studies, there should be a statement in this section that, the investigation is consistent with the guide to the care and use of laboratory animals published by the U.S. National Institutes of Health (NIH Publications No. 85-23, revised 1985). There should be a statement in the human study that, the investigation is in line with the principles outlined in the Helsinki Declaration (BR Med J 1964; ii: 177). Also details of ethics committee approval procedures and a statement that all subjects participated in the study should be included given informed consent. If the results are relevant, the section can be divided into major subsections. For the presentation of data, the figures are preferred to the tables. Data should not be duplicated in both statistics and tables. Extensive numerical data should be presented to figures rather than the main body of text in legends. SI units must be used throughout. The discussion should be enough to compare four manuscript pages and explain the findings of the study in relation to previous work by (other) authors. This section should also contain 1-4 paragraphs related to topics that are beyond Scope of study. The limitations of the study must also be discussed. General information statistics about graphics • All figures should be presented in the form of separate files. • Supply figures on the width of the final size: 84 mm (single column), 176 mm (double column) or 125 mm (intermediate), and containing all parts. • Clearly label parts using capital letters (e.g. A, B, C etc.). • Use serif, type 1/0pentyel/truetype fonts for labels (preferably aerial or calibri fonts). • Make sure all letters/lines are clear and that the photo images are neither blurred nor fuzzy. Please note that for a high resolution image, PPI will likely exceed 1000. • Make sure all statistics are clearly labeled and match the sequence in the text. • Submit only PDF/EPS (Line Art) or TIFF (Halftone/Photograph) files. • PDF/EPS files must be saved with embedded fonts (and if possible with tiff preview). • Black and white photographic images should be supplied as 'grayscale'. • Color images should be supplied as RGB (not CM YK). • For scanned images, scanning resolution (in final image size, see above for guide to size) should be as follows: line art, 600 dpi halftone (including gel photograph), 300 DPI figures including both Halftone and line images, 600 DPI • All scanned pictures embedded in other applications must be scanned at recommended resolutions. (For example, a scanned image that is embedded in ms word or powerpoint document). • Multipart data should be supplied in the final layout in a file. If the parts are supplied separately, the individual parts must be explicitly named with the label in the file names. High-resolution images are encouraged: please note that for high-resolution image, PPI will likely exceed 1000 and can be provided in different formats (JPEG, PNG, etc.). To facilitate the production of quality published graphics, we recommend that authors generate their graphics in software packages that include either Save A or Expand Out to TIFF/EPS/PDF format (for example: Adobe Illustrator, Denba Canvas, Coreldrov, Adobe Photoshop). EPS files can be produced from other applications, for example PowerPoint, but the results can be unpredictable (e.g. fonts and shading cannot be changed correctly, lines may disappear, dotted lines can be solid). If an author has difficulty in creating fights/EPS/PDF from their original document, they can provide original documents in their original formats such as PowerPoint, Word or Excel file. Our typesetters are able to convert/export native document files from most applications to a standard format for further processing. For more information, wiley electronic graphics standards and electronic See information about preparing. Figure legends These should be on a different, numbered page, and grouped under the title Legends. Define all symbols and abbreviations used in statistics. The previous text should not have common abbreviations and others in legend. The colour figures do not charge for the European Journal of Heart Failure colour figures. Graphical abstract and a sentence summary graphical abstract: Authors are required to submit a graphical abstract as part of the article in addition to the text abstract. The graphical abstract should clearly summarize the attention and findings of the article, and will be published online and in PDF as part of the article. This could be one of the key images/figures/graphs of the article. The graphical abstract should be presented for peer review as a separate file, which selects the appropriate file-type designation in the journal's online submission system. The file must be clearly named, for example graphical_abstract.tiff, video_abstract.mp4. See this page for guidance on file format and resolution suitable for graphics. Please make sure the graphical abstracts are in landscape format. 'One Sentence Summary': Short non-technical summary stating the novelty of the article in simple language. Please use the third person, not the first person (i.e. do not use 'I' or 'we'). Please check that your take-home figure is clear and eye-catching. This will help attract readers to your publication. Table titles should be typed with double spacing, but reduce unnecessary space, and each should be placed on a separate sheet. Landscape, unlike layout, tables should be presented in a picture, wherever possible. Each table should be counted in sequence using Arabic numerals. There should also be a title above the table and an explanatory footnote at the bottom. All abbreviations used must be defined in the footnote. NB: The table should be submitted in an editable format such as Excel or Word, and should not be embedded as an image or presented as an image file. Permissions If any data is to be duplicated from the previously published work, written permission must be obtained from both the publisher and the author, and the credit line giving the source added to the relevant picture legend. If text material (250 to 300 words) is to be reproduced from published sources, written permission is required from both the publisher and the author. For small quotations, it is enough to add a bibliographic credit. Letters containing permission for reproduction of either text or pictures must be uploaded along with manuscript files. If you have been unable to obtain permission, please indicate this. Allowed Note This must list any content (figures, tables and/or large amounts of text) that have previously been published. Permissions must be granted from the previous publisher/copyright holder, or, alternatively, if all content is original to submit this, a word document stating the fact must be uploaded with its submission. Acknowledgement should be noted in the acknowledgement of the original contribution of individuals, posted before the conflict of interest statement. Conflicts of interest should all writers make a formal statement indicating any potential that of interest might constitute an embarrassment for any of the authors if it were not to be declared and emerge after publication. May engage in such conflicts, but is not limited to sharing or receiving grants or consulting fees from a company whose product is in the submitted manuscript or which manufactures a competitive product. Statements must be posted before the list of references. If there is no conflict of interest, please insert the words, 'Conflict of interest: no one declared'. The European Journal of Heart Failure uses the ICMJE Conflict of Interest Disclosure Form, and requests that each author submit a complete form as well as presenting. Reference references must be identified in the text by Arabic numerals and quoted numbered in order. All references must be compiled at the end of the article in Vancouver style, except that all authors should be listed. Complete information should be given for each reference, including the title of the article, the abbreviated journal title and the page number. Personal communication, manuscripts in preparation and other unpublished data should not be quoted in the bibliography, but can be mentioned in brackets in the text. Authors must get permission from the source to cite unpublished data. The titles of magazines should be summarized according to index medicines (see index list printed annually in the January issue of Medicus). If a journal index is not listed in the medicis, its name should be fully written. We recommend the use of tools such as Endnote or Reference Manager for reference management and formatting. Endnote reference styles can be searched here: . For Reference Manager we recommend using the European Heart Journal reference style that can be searched here: . Article Citation Examples: 1. Lainchbury JG, Troughton RW, Frampton CM, Yandle TG, Hamid A, Nicholls MG, Richards AM. NTProbnp-guided drug treatment for chronic heart failure: design and methods in battcareealing. Euro J Heart Fell 2006; 8:532-538. If an article has been published online, but has not yet been released or page number given please use the Digital Object Identifier (DOI) number when referring to the article as the example below: 2. If A, Molar JM, Daugaard PC, Kjerer Su, Eric S. Pressure Overload The effects of Phosphodiastase-5 inhibition by Sildenafil in Heart. Eur J Heart Fail;doi: 10.1016/j.eheart.2008.09.016. Published online ahead of the print March 12, 2008. Chapter Citation Example: 3. Nichols WW, O'Rourke MF. Aging, hypertension and disease in humans. In: Arnold E, Ed. Blood flow in McDonald's arteries: theoretical, experimental and clinical theories. 3 Ed. London/Melbourne/Auckland: Lea and Febiger; 1990. P 398-420. Website Citation Example: 4. Panteghini M Recommendations on the Use of Biochemical Markers in Acute Coronary PROPOSALS OF IFCC. EGICC 14. (May 28, 2004); Where the date in parentheses refers to the access date. Support notification support information is not required for articles, but provides more depth and background and may include tables, statistics, videos, datasets, etc. This material must be presented at the same time as the main manuscript, and will appear online without editing or typing. Guidelines on how to prepare this content and which formats and file sizes are acceptable can be found on . Please note that the provision of supplementary material is not encouraged as a general rule. It will be critically evaluated by reviewers and editors and will only be accepted if it is necessary. All manuscripts selected for statistical publication will be reviewed for the suitability and accuracy of the statistical methods used and for interpretation of statistical results. All papers submitted should provide a subsection detailing statistical methods in its Methods section, including the specific method used to summarize the data, the methods used to test their hypothesis test and (if any) the level of importance used for hypothesis testing. The funding of all funding sources for the work in question should be given in a separate clause called funding to the sources of details. It should appear before the 'Acknowledgement' section. The following rules must be followed: The sentence should begin: 'It was supported by work...' The entire government funding agency must be renamed, i.e. 'National Cancer Institute in national institutes of health' or simply 'National Institutes of Health' not 'NCI' (one of 27 subinstitutes) or 'NCI in NIH' (full RIN -UK list approved Grant numbers granted should be complete and accurate and should be provided in parentheses as follows: '[Grant number ABX CDXXXXXXX]' Many grant numbers should be separated by a comma as follows: '[Grant number ABX CDXXXXXXX, EFX GHXXXXXXX]' agencies must be separated from a half-colon (plus) and 'before the previous funding agency) where individuals need to specify for certain sources of funding of the following text, after the agency concerned should be added or '[author initials] to provide numbers.' Here's an example: 'This work was supported by the National Institutes of Health [P50 CA098252 and CA118790 to R.B.S.R] and the Alcohol and Education Research Council [HFY GR667789]. Submission of manuscripts the European Journal of Heart Failure in uses web-based submission and review systems. The online submission facilitates the submission of manuscripts from authors and streamlines the review and publishing process. Author ejhf.editorialoffice@wiley.com to submit can send questions related to . For inquiries about the review process and magazine processes, the editorial office may be ejhf.editorialoffice@wiley.com or +39 030 338 at 4130. The status of documents as a policy will not be discussed by telephone. Once you have prepared your manuscript according to the section '3. Pre-submission', please go to the online submission system by clicking here. For the first time users will have to click 'Register' on the navigation menu at the top of the screen. The system will send an automatic e-mail with your user name and password. Detailed guidelines for authors and reviewers are available on the submission site. 4. Submission requirements each submission must include a conflict of interest statement, and must be accompanied by a cover letter, and ICMJE conflicts of interest disclosure forms and EJHF author contribution forms from each author. 4.1. Covering the letter the cover letter must include the following: a declaration that 'manuscript, or part of it, has neither been published (except as abstract or thesis) nor is currently under consideration for publication by any other journal'; An explanation as to why your paper would be of particular interest to readers of the European Journal of Heart Failure; A statement announced that all name writers have seen and approved the final version of the manuscript. 4.2. When a conflict of interest first submitted, all authors must make a formal statement at the time of submission indicating any potential conflict of interest that may constitute an embarrassment to any of the authors if it were not to be declared and were to emerge after publication. May engage in such conflicts, but is not limited to sharing or receiving grants or consulting fees from a company whose product is in the submitted manuscript or which manufactures a competitive product. The European Journal of Heart Failure follows the guidelines of the International Committee of Medical Journal Editors. Statements of conflict of interest after any 'acknowledgement' and 'financing' classes should be included in the manuscript. If there is no conflict of interest, the authors must include 'conflict of interest: no declared'. Submissions that do not include this section will not be sent for peer review. Post Acceptance 5. Author Services online production tracking is available for your articles through Wiley Blackwell's author services. Author services enable authors to track their articles, once it has been accepted, for publication online and in print through the production process. Authors can check the status of their articles online and choose to receive automatic e-mail at major stages of production. The same author will receive a unique link that enables them to register and their articles are automatically added to the system. Please make sure a full e-mail address is provided when submitting the manuscript. For more information on online production tracking and for a wealth of resources including FAQs and suggestions on articles, visit To present more. 6. Copyright and OnlineOpen If your paper is accepted, the author identified as the formal related author for the paper will receive an email that will motivate them to login to the Author Services; Where through the Wiley Writer Licensing Service (WALS) they will be able to complete the licensing agreement on behalf of all authors on paper. For authors signing the Special License Agreement, if the OnlineOpen option is not selected, the same author will be presented with a special license agreement to sign. The terms and conditions of the Special License Agreement can be previewed below: Terms and Conditions. Please do not complete this PDF unless you are asked to login to the author services described above. The approved versions note contributors on deposits of the Funder arrangement some funders, including NIH, members of research councils UK (RCUK) and the Wellcome Trust, require a deposit of the approved version into a repository after the sanctions period. The details of the financing arrangement are laid down on the following website: . Please contact the journal production editor if you have additional money requirements. Institutions have arranged with Wiley's few academic institutions to allow deposits of the accepted version into institutional reserves after a sanctions period. The details of such arrangements are laid down on the following website: . For authors opting for online openness, the same author will have the option of the following Creative Commons License Open Access Agreements (OAA): Creative Commons Attribution Non-Commercial License OAA Creative Commons A To preview the terms and conditions of theTribution Non-Commercial-NoDerivs License OAA these open access agreements please visit the Wiley Author Services and visit on the hosted copyright FAQ. If you choose the OnlineOpen option and your research is funded by members of the Wellcome Trust and Research Councils UK (RCUK), you will be given the opportunity to publish your article under a CC-by licence that supports you in complying with Wellcome Trust and Research Councils UK requirements. For more information about this policy and journal-compliant self-collection policy please visit . Click the link below to preview the terms and conditions of this license for RCUK and Wellcome Trust authors: Creative Commons Attribution License OAA To preview the terms and conditions of these open access agreements please visit the Copyright FAQ hosted on the Wiley Writer Services and visit . Article Promotional Support Ville Editing Shared video provides personalized video, design and writing services for creating abstracts, infographics, conference posters, keeping summaries and research news for your research – so you can help bring your research into mind. 7. Approved Article Journal provides Wiley's approved article service for all manuscripts. This service ensures that manuscripts 'in the press' are published online very soon after acceptance before copy-editing or typesetting. Approved articles are published online a few days after final acceptance, only appear in PDF format, given a digital object identifier (DOI), which allows them to be quoted and tracked, and indexed by PubMed. After the publication of the final version article (articles of records), do remains valid and the article may continue to cite and be used to use. Approved articles will be indexed by PubMed; The authors should therefore submit to carefully check the names and affiliations of all the authors provided in the cover page of the manuscript so it is right for sequencing. Later final copying and proof articles will appear in an issue on wiley's online library; The link to the article in PubMed will be updated automatically. 8. Proof Correction The corresponding author will receive e-mail alerts containing links to a website. A working e-mail address must therefore be provided to the corresponding author. Proof can be downloaded as PDF (Portable Document Format) file from this site. An Acrobat reader will be needed to read this file. This software can be downloaded (free of cost) from the Adobe website. This will enable the file to be opened, read on the screen and add any improvements to it. Further instructions will be sent with proof. 9. Early View (online publication before print) Early View articles are full text articles published online before their publication in printed issue. Early view articles are versions of records and are complete and final. They have been fully reviewed, modified and edited for publication, and the authors have included final improvements. Since they are in final form, no changes can be made after online publication. Early View articles are given a Digital Object Identifier (DOI), which allows to quote and track the article before allocating a problem. After print publication, DOI remains valid and may continue to cite articles and be used to use. 10. Author Material Archival Policy Please note that unless specifically requested, Wiley Blackwell publishing will dispose of all hardcopies or electronic materials submitted two months after publication. If you need a return of any content submitted, please notify the editorial office or production editor as soon as possible. 11. Offprint and additional copies A PDF offprint of articles published online will be provided free of cost to the author concerned, and the subject can be distributed Publisher terms and conditions. Additional paper offprints can be ordered online. Please click on the following link, fill in the required details and make sure you type the information in all required areas: . If you have questions about the offprint please e-mail: offprint@cosprinters.com. Other information 12. Visit the European Journal of Heart Failure home page on for more information online, and for the web pages submission guidelines and digital graphics standards of the Wiley Online Library. The European Journal of Heart Failure is also available online through the Wiley Online Library in . .
